TideSafe

Know Your Flood Height. Protect What Matters.

PRIVATE FLOOD-RISK ASSESSMENTS FOR NEWPORT HARBOR WATERFRONT HOMES.

For 38 years, my parents have lived on Newport Harbor and have experienced countless high tides.

During the July 22, 2026 king tide, the predicted tide was 6.97 feet and it caused flooding and damage to some bayfront homes. Additional king tides are expected in November, December, and January. The highest of these is predicted to be about 7 feet. If the current Super El Niño Kelvin wave raises background sea levels by another 6–12 inches, conditions could approach an 8-foot tide scenario on December 24. We are taking steps now to protect their home with a 15-inch sandbag barrier.

That experience is why we started TideSafe—to help other waterfront homeowners understand their flood risk and prepare before extreme high tides arrive.

What Rising Tides Can Mean for Your Property

Even a few extra inches can determine whether water stays outside—or enters your home.

Choose Your Property Assessment

PROPERTY ELEVATION ASSESSMENT

$800

- Elevation survey
- Measure and document key elevations on your property
- Determine extreme high tide risks and likely water entry points
- Identify potential damage areas at differing elevations
- Provide recommendations and water-abatement measures

Best for homeowners who can identify past high-tide levels on their property.

CERTIFIED SURVEY ELEVATION & FLOOD RISK ASSESSMENT

$3,100

- Certified surveyor elevation report
- Detailed site map and elevations
- Analysis of current and future high-tide impacts
- Recommendations for permanent and temporary flood protection
- Useful for insurance, permitting, or long-term planning

Best for homeowners without reliable knowledge of past high-tide levels. This service replaces the Property Elevation Assessment.

Before the next king tide, understand your property's true exposure.
